Education

BS Data Science, Indiana University, Aug. 2022 - Dec. 2025

Minors in Mathematics and Statistics

Coursework in Machine Learning, Hardware Acceleration for Deep Learning, Statistical Inference, Probability Theory, Neuroimaging, Algorithms for Bioinformatics, and Data Visualization

Experience

AI Engineer, Destrier Group, Aug. 2025 - Jan. 2026

Sydney, Australia

- Led alignment finetuning informed by human psychometrics at a board advisory firm
- Productionized various scalable oversight techniques for character alignment on Llama 3.1B
- Developed interactive chat interfaces for product demos

DevOps, Supercomputing '24 Conference, Aug. 2024 - Nov. 2024

Atlanta, GA

- Managed data visualization systems for a >9 TBPS temporary network
- Designed and implemented an API-based system displaying real-time performance for >17,000 users
- [like one more bullet point?]

Software Development Intern, Nokia, May. 2024 - Aug. 2024

Mountain View, CA

- Scripted and built an automation pipeline with release infrastructure for an internal chip simulation tool
- Communicated project progress to a multi-national team through data-driven reports

Research Intern, Lawrence Berkeley National Lab, May. 2024 - Aug. 2024

Berkeley, CA

- Won first place at ACM Student Research Competition for presented paper at Supercomputing '23
- Led project analyzing cache utilization data using NERSC's supercomputer to study cache behavior trends
- Developed and trained LSTMs to predict behavioral trends across regions

Digital Team, Indiana Daily Student, Aug. 2023 - May. 2025

Bloomington, IN

- Designed many data visualizations to increase story engagement for the school newspaper website
-
- Provided technical consultations to teach and encourage data-based journalism

Peer Mentor & Tutor, Luddy Living Learning Center, Aug. 2023 - May. 2025

Bloomington, IN

- Peer tutor across math, statistics, and programming classes
- Served as a student ambassador for IU's school of informatics; led tours for prospective students

Projects

- Mosaic generating evolutionary algorithm to produce artistic representations with Minecraft textures
- Spotify analytic tool that helps analyze listening data with various visualizations and metrics
- Simulated tumor-induced angiogenesis by using physics models on cells, substrates, and indicators
- Election day website for the newspaper with real-time dynamic maps and charts showing live results
- Interactive map enabling users to explore demographic trends in active missing persons cases

Additional Information

Skills: Python, R, Java, Javascript; PyTorch, Tensorflow, sklearn, PySpark, Altair, Qiskit, Slurm

Activities: Bhangra teacher, competitive dancer, cruciverbalist, casual musician
